

Here is the dataset I came up with from FiveThirtyEight

<https://projects.fivethirtyeight.com/mortality-rates-united-states/maternal/#2013>

The data I want to look at specifically is the data on maternal mortality rates. How do we interpret the data? How does Iowa compare to other states? I tried to find specific data but could only find reports and not a put togethers set, though I can still pull from that. For data analysis I will use the data from the site www.kff.org which can be filtered to show OBGYNs in practice for a specific state. I decided to use the mapping function in Excel since it is a bit more straightforward to use than the option in R, even if the option in R is much more customizable.
